### **DETAILED ACTION**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a method or system for nucleic acid sequencing, classified in class 435 or 422, subclasses 6 and 68.1, respectively. If this Group is elected then the below summarized specie election is also required.
- II. Claims 13-16, drawn to a method for obtaining information about a signal, classified in class 710, subclass 1.

#### ***Specie election requirement for Group I:***

This application contains claims directed to the following patentably distinct species of the claimed invention:

Distinct species of uses are cited in the claims, such as human identification (instant claim 5), diagnostic testing (instant claim 6), genetic localization of gene discovery (instant claim 7), criminal justice applications (instant claim 8), cancer assessment (instant claim 10), or an unspecified usage such as in instant claim 1 where only sequencing per se is required rather than the specified usages as in the above listed instant claims. These usages are generally separately published and as such document the undue search burden if they are searched together therefore supporting this specie election requirement.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is

finally held to be allowable. Currently, claims 1-4, 9, 11, and 12 are generic to the above described species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The inventions are distinct, each from the other because of reasons set forth above regarding the distinct species in Group I and as follows for the restriction groupings:

Art Unit: 1631

The inventions of Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to different critical functions in that nucleic acid sequencing per se is the subject matter of Group I whereas signal processing for obtaining information whatever source that the signal is from is the critical function in Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
